

**GAMING APPARATUS WITH
NOVEL DISPLAY TECHNIQUE**

Abstract of the Disclosure

5 A gaming apparatus may include a cabinet having a front face, a gaming display
supported inside the cabinet and positioned adjacent the cabinet front face, the gaming
display being operable to generate images and a controller operatively coupled to the
gaming display. The controller may comprise a processor and a memory operatively
coupled to the processor. The controller may be programmed to allow a person to
10 make a wager, cause an image associated with a game to be generated on the gaming
display, to determine an outcome of the game represented by the image and to
determine a value payout associated with the outcome of the game. The controller also
may be programmed to display on the gaming display a plurality of display elements
which change from displaying cards to displaying portions of a first display object
15 wherein the portions of the first display object create an identifiable image.
